

Roman Knyazhitskiy

✉ cv@knyaz.tech —  knyaz.tech —  [knyazer](https://github.com/knyazer)

Summary

Research Engineer at Mirai Labs, enjoying efficient ML, learning theory and robotics. My side interests include PL theory, philosophy of science and AI Safety.

Education

MPhil in MLMI (Machine Learning), University of Cambridge 10/2025 – 09/2026
BSc Computer Science and Engineering + Honours, TU Delft 09/2022 – 07/2025

Work Experience

Research Engineer, Mirai Labs 01/2026 – now

- Introducing a few heuristics into YAQA algorithm to improve PTQ quality.
- Helping with building the QAT/QAD pipeline.
- Leading the KV-Cache compression efforts.
- Evals science.

Research Associate, TU Delft 03/2023 – 08/2025

- Developed a transformer-based Prior-Data Fitted Network (PFN) for hyperparameter optimization, achieving 15–20% improvement over the current SOTA.
- Presented a deep dive on the modern view on first-order oracle optimizers (Bernstein et al.), showing its connection to proximal gradient descent.

Student Team ML Lead, Delft Mercurians 05/2023 – 09/2025

- Led machine learning for an autonomous robot soccer team (RoboCup Small Size League).
- Deployed a real-time Model Predictive Control system on hardware (15 ms latency), interfacing Python with Rust via PyO3. Never got used in production.

Projects

- **Continuous-time Differentiable Simulator (2023)**: Implementation of a small BRAX-like physics engine in JAX, with simple solvers and better multi-body support. Continuous-time functionality never arrived.
- **Weather Forecasting System (2024)**: A small subscriber-based system that aggregated weather data from various sources, and used a bunch of ML to bet on weather on Polymarket. Returned 5k\$ before being squeezed out.
- **Stack Associated Beam Tracing (2022)**: Likely fastest* octree tracing/rendering algorithm at the time.
- **Python Abstract Interpreter (2025)**: Rust-based prototype of a Python abstract interpreter. WIP.
- **Robotics (2015-2026)**: I've been writing code for various robots and embedded systems for 11 years now, mostly in C/C++. Recently moved on to more applied ML side.

Honours and Awards

- **1st Place**, Bunq Hackathon 6 (2025); €30,000 prize
- **2nd Place & Special Prize**, Epoch AI Hackathon (2024)
- **Best Software Solution**, RoboCup World Championships, Sydney (2019)
- **Silver Medal**, AIIJC International AI Competition
